

ONLINE GEOTECHNICAL SOFTWARE

Deltares systems

Online geotechnical software

All popular geotechnical Deltares simulation products are available over the internet via our Online Software service (Software as a Service (SaaS)). An internet connection and subscription is sufficient for worldwide access. Billing is according to the actual use and subscription costs per quarter.

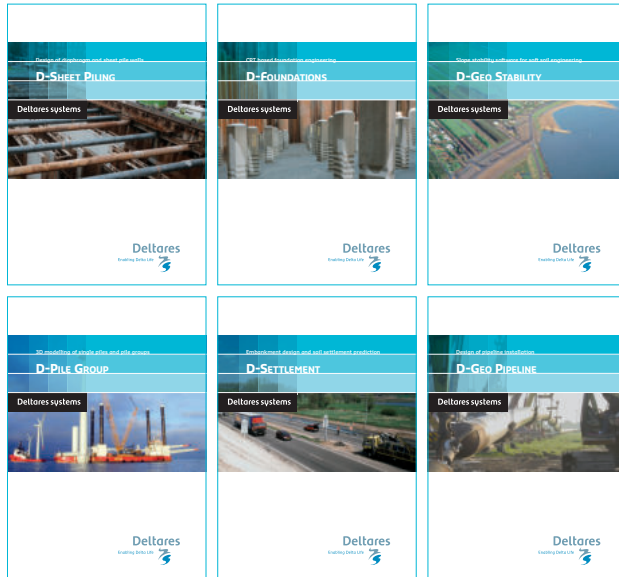

How does it work?

Your tablet, smartphone or PC will function as a terminal. Hence the actual calculations are being performed on high-capacity VMware Horizon servers. Keystrokes and mouse movements are transferred from your device over the Internet to our server using a secure gateway. You may even print on a local printer or generate PDF files of the output documents. All files are stored on our servers and may be downloaded to your device at any time. Your user account is invisible and inaccessible to other users.

Advantages

- Access to all popular geotechnical Deltares simulation products:

- Automatic availability of software updates
- No software installation required
- Pay for actual use
- World-wide access and 24/7 availability
- Secure data storage with back-ups
- Support via Deltares software helpdesk (during office hours)

How to start using Online Software

Online Software is a subscription based service. If you have a subscription, you will get an account that will give you access to the Online Software platform. An account can be used by multiple users in an organization, but not at the same time.

Costs*

One-time set-up fee:	€ 115
Quarterly subscription costs:	€ 115
Calculation costs:	€ 17,50 per hour

*) Prices per 2022, prices are subject to change without prior notice.

What users say about "Online geotechnical software"

BT Geoconsult: "The online software by Deltares systems has proven to be ideal for our projects. We do not need to worry about bringing in the right software. Besides, we can easily switch between different types of calculations."

Kwast Consult: Erik Kwast: "As a starting company, I do not need to invest in geotechnical software, when using the online software by Deltares systems. All applications are available and kept up-to-date."
