

## Free access to Deltares facilities for SMEs and start-ups

With the SME Challenge, Deltares supports inspiring innovations that have impact. Think of projects such as an artificial reef that generates energy from wave movements or a 3D-printed coral reef that breathes new life into ecosystems and a biofilter based on fungal technology that converts harmful substances into fertile biomass. Thanks to the Deltares SME Challenge, these innovations have been brought closer to the market.

This autumn, Deltares will again open the doors of all experimental facilities to support initiatives from Dutch start-ups and SMEs.

### Share the Deltares SME Challenge in your network!

All Dutch SMEs and start-ups as defined by the Europese Unie may apply for this offer. In addition, the offer focuses on design concepts up to Technology Readiness Level 4. For the application form and more information visit our website.
